

AI Dispatch Ticket

Capture - Triage - Dispatch - Verify - Reroute

1 | CAPTURE THE WORK

Department / team	Workflow owner
Workflow being changed Trigger -> work -> decision / handoff -> output	Friction signal Delay rework error queue search repetition inconsistency customer pain
Before-state baseline How long, how often, how much rework, what quality issue, or what user pain?	Business outcome What would improve if this worked?

2 | TRIAGE THE OPPORTUNITY

Value Low medium high	Feasibility Low medium high	Data / trust Low medium high
Adoption burden Low medium high	Owner strength Low medium high	Stop condition What evidence ends or reroutes the test?

3 | CHOOSE THE DISPATCH ROUTE

ENABLE Teach the work	ASSIST Augment judgment	AUTOMATE Remove stable friction	BUILD + INTEGRATE Create a local tool	ESCALATE Route authority away
---------------------------------	-----------------------------------	---	---	---

4 | BOUND THE FIELD TEST

Smallest useful intervention	Human authority retained
Approved tools / data	Exception and escalation path
Proof metric Cycle time quality rework capacity experience revenue support risk	Review date / owner

5 | VERIFY AND REROUTE

Evidence observed Behavior, outcome, quality, exception, feedback	Next decision Adopt iterate scale retire escalate
