

AI Dispatch Ticket

Candidate operating artifact · Russell Dudek

1 · CAPTURE THE WORK

DEPARTMENT / TEAM

WORKFLOW OWNER

WORKFLOW BEING CHANGED

Trigger → work → decision / handoff → output

FRICTION SIGNAL

Delay · rework · error · queue · search · repetition · inconsistency · customer pain

BEFORE-STATE BASELINE

How long, how often, how much rework, what quality issue, or what user pain?

BUSINESS OUTCOME

What would improve if this worked?

2 · TRIAGE THE OPPORTUNITY

VALUE

1 2 3 4 5

FEASIBILITY

1 2 3 4 5

DATA / TRUST

1 2 3 4 5

ADOPTION

1 2 3 4 5

OWNER

1 2 3 4 5

DATA BOUNDARY

Approved sources, sensitive data, retention, access, traceability

HUMAN AUTHORITY

What may AI propose? What may it execute? What requires approval?

3 · CHOOSE THE DISPATCH ROUTE

ENABLE

Training, examples, office hours, role playbook

ASSIST

Copilot, prompt, template, retrieval, review aid

AUTOMATE

Workflow, routing, classification, notifications

BUILD + INTEGRATE

Bot, internal tool, script, API, bounded agent

ESCALATE

R&D, IT, policy owner, security, or stop

4 · FIELD TEST CONTRACT

SMALLEST USEFUL TEST

What is the narrowest real-work experiment that can produce evidence?

USERS / COHORT

Who will use it, for what work, and for how long?

PROOF METRIC

Cycle time · quality · error · capacity · customer experience · revenue support · risk

FAILURE + EXCEPTION PATH

What could go wrong? Who reviews? Where does work escalate?

5 · CLOSE THE LOOP

OUTCOME EVIDENCE

Before vs after · user feedback · real-world performance

ADOPTION EVIDENCE

Repeat use · workflow depth · manager observation · drop-off

CLOSE CODE

ADOPT · ITERATE · REROUTE · RETIRE · ESCALATE

LEARNING RETURNED

What should change in the solution, training, policy, backlog, or next test?
